

The GDF would like to thank and congratulate a new generation of supporters as we launch a Young Professionals committee. Recognizing that prevention, treatment and cure of genetic diseases is a concern to young and growing families, a new generation of supporters have taken the initiative to generate awareness and support among their peers with a fundraising and information generating forum scheduled for early 2008.

We are both delighted and saddened by the new members who have joined our Foundation – delighted because they join us in our mission to combat genetic disease; saddened because they have been touched by these diseases. We are heartened by the courage, determination, and dedication of these new members and invite you to join our cause. Work with us, continue to support us financially, and help us defeat genetic diseases and save future generations.

With heartfelt thanks and warm regards for a happy and healthy New Year,

Elisa Ross

Genetic Disease Foundation

The Genetic Disease Foundation (GDF) was established in 1997 by patients, parents and families who have suffered from genetic diseases.

The Foundation's mission is to support research and education to prevent and cure genetic diseases.
